

CS 499 - Git Repository Submission Instructions

Overview

Submit your project as a gzip-compressed tar archive (*main.tgz*) containing:

- All project files from the *main* branch (no *.git* directory)
- A full commit history log file (*git-log.txt*)

Step 1: Go to the Repository

Run the following command:

```
$ cd /path/to/your/repository
```

Step 2: Ensure You Are on *main* and Up to Date

From the root of your repository:

```
$ git checkout main
$ git status
```

git status should show "On branch main" and "nothing to commit, working tree clean".

If you do not see this, run:

```
$ git stash
$ git checkout main
$ git pull
$ git status
```

Step 3: Generate *git-log.txt* with the Full Log

From the repo root:

```
$ git --no-pager log --decorate --graph --stat > git-log.txt
```

This writes the full commit history (including full messages) from *main* into *git-log.txt*.

Step 4: Create *main.tgz* with Project Files and *git-log.txt*

From the root of your repository:

```
$ git archive --format=tar.gz -o "../$(basename "$PWD")-main.tgz" --prefix="$(basename "$PWD")/" main
```

This creates a gzip-compressed tar file in the parent directory with “-main.tgz” as the filename suffix.

This archive includes:

- Your project directory and all files
- The *git-log.txt* file created in Step 3
- No *.git/* directory or Git metadata

Step 5: Sanity-Check the Archive

List the contents to verify:

```
$ tar tzf "../$(basename "$PWD")-main.tgz"
```

You should see your project directory and files, including *git-log.txt*, and no *.git/* directory.

Submission

Upload your tarball to the course website.
